Genius[®]
Rollerscreen Systems, LLC

The retractable way to screen any door or window

At Genius Rollerscreens, we make the world's finest retractable screen systems. Rollerscreens compliment any décor and provide complete protection against flying insects and other airborne pests. Genius sun-control fabrics also offer a great solution to help reduce the fading of interior furnishings while filtering out uncomfortable heat and glare.

French Doors

Our Rollerscreen Systems Will Help Add Distinction, Grow Business and Build Sales!

At Genius, we make rollerscreens that **add a distinctive touch** to any door or window design. Whether as an option for new windows and doors or as a retrofit addition to existing ones, rollerscreens are a great way to attract customer attention and increase market share. Rollerscreens are popular, in high demand, and an impressive addition to any product offering.

At Genius Rollerscreens, we team alongside only major accounts like yours. We have designed a **superior product** that is versatile and **easy** to custom size and install... **a rollerscreen unlike any other.** Our unique, unobtrusive design guarantees reliable, easy use for years to come.

Some customers want off-the-shelf product with fast reliable service while others desire to customize and fill specific needs or unusual configurations. Our location in Northport, Alabama is the finest facility in the industry equipped to fill every need. Our equipment is state-of-the-art and we continually seek to innovate and improve. At Genius, our goal is to team with you to facilitate the growth of your business!

Flexibility

All Genius screens are designed for flexibility and customization. We offer product in a variety of colors. In those cases where a standard color pallet is not quite right, custom colors are available to match specific needs.

Doors

Door Rollerscreens are an **attention getter** and a terrific way to screen any entry, even French doors and sliding patio doors. Our retractable screens offer all of the advantages of a concealed screen system including rollout expandability; the screen expands upon impact preventing both screen damage and personal injury.

Genius Rollerscreens virtually disappear when not in use. The unique Genius design allows the screen to mount into the natural recess area of any door where it remains unnoticed until needed. Custom sizing is fast and easy and installation takes just moments. Genius screens are popular, easy to sell, and a great addition to any existing product offering; a terrific way to distinguish your product and attract customers.

Entry or Patio Doors

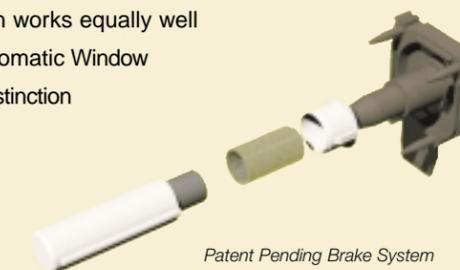

Windows

Vertical or horizontal, manual or self-engaging, Genius screens **add distinction** to any window.

Windows

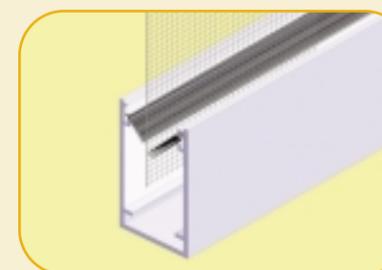

Our new, patent pending Automatic Window Rollerscreen was designed with OEM's in mind. The automatic rollerscreen engages as the window sash opens yet the screen retracts out-of-site as the window is closed. Installation onto existing window designs is quick in either a factory or a field environment. The Genius system's unique design also means that custom sizing and installation take mere moments. Because the screen is protected when not in use, there is never a worry about lost or damaged screens during delivery. Additionally, the Automatic Window Rollerscreen works equally well as an aftermarket product. The Automatic Window Rollerscreen is a great way to add distinction to your existing line of windows.

Patent Pending Brake System

Product

All Genius Rollerscreens are made to last the test of time. Each product is made using only the finest materials for the best fit and finish in the industry. The aluminum extruded frame is powder coated producing the best appearance possible with long-lasting, easy-to-clean surface. The screen is also made using only the finest material from Phifer Wire products; the best insect screening available anywhere. A thick insect piling on the open ends along with a full-length rust-proof magnetic seal ensures that while the screen is closed the bugs stay out.

Anti-Wind Brush pile

And while our products are recognized as the industry leader, our commitment to innovation will keep us at the top. One innovation is our Patent Pending Brake System. This product enhancement further distinguishes the Genius product from all the others. The brake system controls the recoil speed preventing the screen from slamming open if accidentally released. The brake can be installed as original equipment or retro-fitted in the field to any Genius Rollerscreen. The brake is concealed inside the systems housing so the

appearance of the screen is no different than a screen without the brake system. The brake is available for window or door applications.

Another example is our Anti-Wind Brushpile specifically designed for those applications where windy conditions exist. Our anti-wind pile keeps the screen in its place and utilizes different length of brush for each side, leaving a small central gap for the screen to pass freely without friction. Easy use, great appearance, keeps bugs out... even in windy conditions.
