

# Glide Screen

**Single Doors:**  
Side Rail with Full Length Magnetic

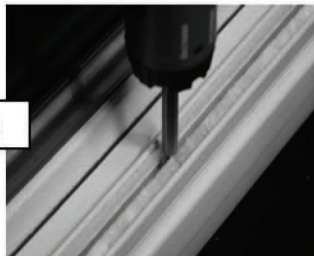

Single Door

**Double Doors:**  
Second Double Door Housing (Instead Of Side Rail)

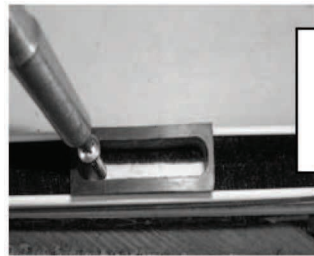

Double Door

Secure Rails with Screws

Using a Pile Opener Makes It Easier To See Inside Rails While Fastening Screws

**7 – Installing Slide Bolt Locks (Double Doors Only):** Take your rail receiver clips and position one on each the top and bottom rails to provide an area for the slide bolts to slide and secure into. Typically the receiver clips should be placed slightly off center (approx. 3”-4” toward your primary screen panel), to allow for easier operation. This will allow a homeowner to have one of the actual door panels closed and still easily reach the handles to open and close the screen.
